Key benefits:

- Increased productivity;
- Safe sharing of files and documents;
- Increased file security based on product's excellent response time;
- Ease of use.

Key features:

- Optimized scanning for faster file access;
- Multithread scanning significantly reducing file scanning time;
- On-access and on-demand scanner to fully protect the file server;
- Intuitive product interface;
- Centralized management software compatibility.

BitDefender advanced technologies:

 At the core of all BitDefender products is B-HAVE (Behavioral Heuristic Analyzer in Virtual Environments). In addition to traditional signature detection and content-based heuristic methods, B-HAVE implements behavior-based heuristics. By emulating a virtual computer-inside-a-computer where pieces of software are run and checked for potential malicious behavior, B-HAVE virtually eliminates false positives and significantly increases detection rates for new and unknown malware. This proprietary BitDefender technology represents a new security layer that keeps the operating system safe from unknown viruses by detecting malicious pieces of code for which signatures have not yet been released.
